

Debeaker Machine Manual

Weight :
6.4kg (Net)
Electrical Supply
230V 50/60 Hz

Model: DM1

The Result

Shown is 7 day old chick after Precision Debeaking.
Note the slightly longer lower beak.

After 18 Weeks

A mature hen debeaked at 7 days of age by Precision Debeaking

FEATURES

- Proven – Accepted and used by poultrymen around the world.
- Rugged – Designed for years of service with minimum maintenance.
- Economical – Long life gives extremely low cost per bird.
- Adaptable – Full line of blades, attachments and power units available for all types of beak trimming & toe clipping.
- Versatile – Suitable for small, medium or large producer.
- Flexible – Can be operated by power unit or foot pedal.

The DEBEAKER is recognised and used around the world as the only proven reliable and safe method to stop:

- CANNIBALISM
- PICKING
- FIGHTING
- EGG LOSS

The DEBEAKER beak trims and cauterizes in a single operation. This inhibits bleeding and beak regrowth. Birds usually begin eating right after trimming. Everyday the DEBEAKER is used by turkey growers, hatcherymen, broiler producers, egg producers and game bird breeders around the world. Improvements to the DEBEAKER include a redesigned blade contact area. Contact leads have been eliminated with the use of heavy transformer lead end terminals which provide better blade contact. Maintenance is reduced and easier to perform. The previously used carriage hinge has been replaced with pivots mounted low on the center line of the blade. This gives a squared, even cut on the bird's beak.

The DEBEAKER is supplied complete with Blade, standard beak support and 6-foot power cord.

"Debeaker with Fan also available that help to exhaust the smoke & bad smell"
